

Carbon Filter for Solder Smoke Absorption

PRODUCT ID: 3836

Description

If you do a lot of soldering indoors, a **Carbon Filter** is essential for absorbing that solder smoke and leaving your air smelling fresh.

These measure about 13 x 13cm but are easy to trim with scissors or a utility knife. It took us no time to crop one to fit our Miniature Desktop Fan. They're 9mm thick, which slides into most 'standard' solder smoke filters.

Comes 1 piece per purchase!
