1. Introduction

The FXP29 is a unique super small monopole ultra-low profile antenna for the 2100MHz 3G UMTS/ HSPA+ application band. The FXP29 antenna has peak gain of 1.5dBi and efficiencies of 45%.

It is made from poly-flexible material, has a tiny form factor (12.7mm*8.4mm*0.24mm) and has double-sided 3M tape for easy “peel and stick” mounting onto the inner plastic housing of a device. It is an ideal solution for compact M2M devices which require 3G functionality at the 2100MHz band.

The cables length and connector are customizable. The standard length is 70mm and is recommended, some detuning and efficiency decrease is observed on other cable lengths, see chart below for details.
