Monolithic Digital IC

PWM Current Control Type
Stepping Motor Driver

Overview

The LB1847 is a driver IC for stepping motors with PWM current control bipolar drive (fixed OFF time). A special feature of this IC is that VREF voltage is constant while the current can be set in 15 steps, allowing drive of motors ranging from 1-2 phase exciter types to 4W 1-2 phase exciter types. The current decay pattern can also be selected (SLOW DECAY, FAST DECAY, MIX DECAY) to increase the decay of regenerative current at chopping OFF, thereby improving response characteristics. This is especially useful for carriage and paper feed stepping motors in printers and similar applications where high-precision control and low vibrations are required.

Features

- PWM current control (fixed OFF time)
- Load current digital selector (1-2, W1-2, 2W1-2, 4W1-2 phase exciter drive possible)
- Selectable current decay pattern (SLOW DECAY, FAST DECAY, MIX DECAY)
- Simultaneous ON prevention function (feed-through current prevention)
- Noise canceler
- Built-in thermal shutdown circuit
- Built-in logic low-voltage OFF circuit

Specifications

Absolute Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Motor supply voltage	V_{BB}		50	V
Output peek current	I_O peak	t_W = 20µs	1.75	A
Output continuous current	I_O max		1.5	A
Logic supply voltage	V_{CC}		7.0	A
Logic input voltage range	V_{IN}		-0.3 to V_{CC}	V
Emitter output voltage	V_E		1.0	V
Allowable power dissipation	Pd max	Independent IC	3.0	W
		With infinitely large heat sink	20	W
Operating temperature	Topr		-20 to +85	°C
Storage temperature	Tstg		-55 to +150	°C

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

Allowable Operating Ranges at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Motor supply voltage range	V_{BB}		10 to 45	V
Logic supply voltage	V_{CC}		4.75 to 5.25	V
Reference voltage range	V_{REF}		0.0 to 3.0	V

Electrical Characteristics at Ta = 25°C, V_{BB} = 45V, V_{CC} = 5V, V_{REF} = 1.52V

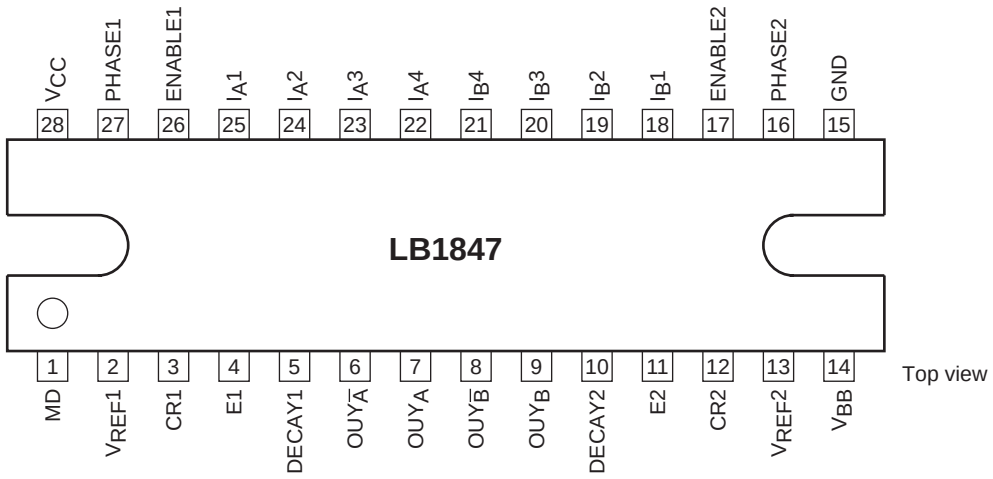
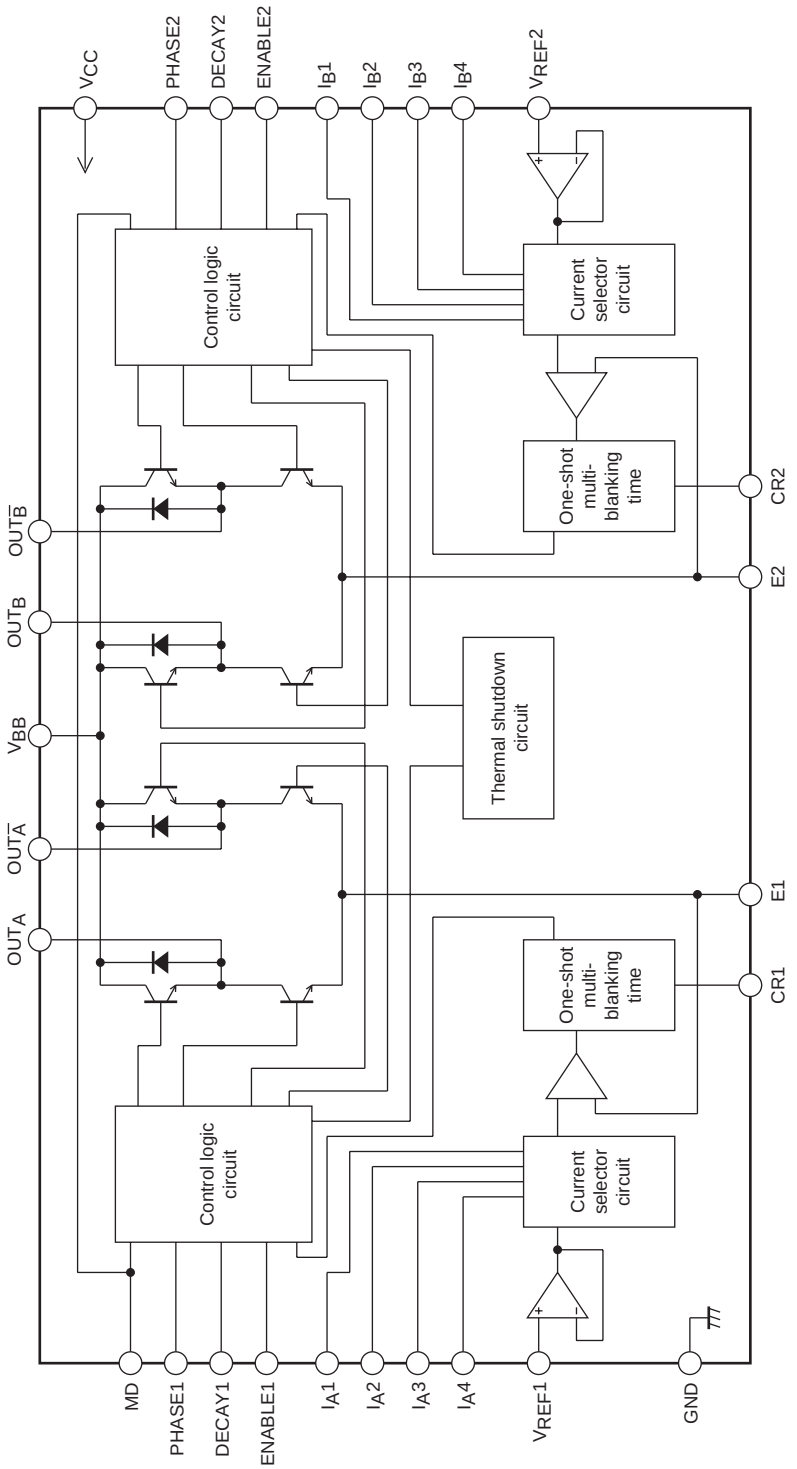
Pin Assignment



Block Diagram



Pin Function

Pin No.	Pin name	Function
1	MD	Sets the OFF time for FAST mode and SLOW mode in MIX DECAY. Setting input range: 4V to 1.5V.
2 13	$V_{REF}1$ $V_{REF}2$	Output set current reference supply pin. Setting voltage range: 0V to 3V.
3 12	CR1 CR2	Output OFF time setting pin for switching operation.
4 11	E1 E2	Pin for controlling the set current with sensing resistor RE.
5 10	DECAY1 DECAY2	SLOW mode/FAST mode selector pin. DECAY2 SLOW DECAY: H FAST DECAY: L
6 7 8 9	$OUT_{\overline{A}}$ OUT_A $OUT_{\overline{B}}$ OUT_B	Output pin.
14	V_{BB}	Output stage supply voltage pin.
15	GND	Ground pin.
27 16	PHASE1 PHASE2	Output phase selector input pin
26 17	ENABLE1 ENABLE2	Output ON/OFF setting input pin.
22,23 24,25 21,20 19,18	I_A4,I_A3 I_A2,I_A1 I_B4,I_B3 I_B2,I_B1	Output set current digital input pin. 15-stage voltage setting.
28	V_{CC}	Logic block supply voltage pin

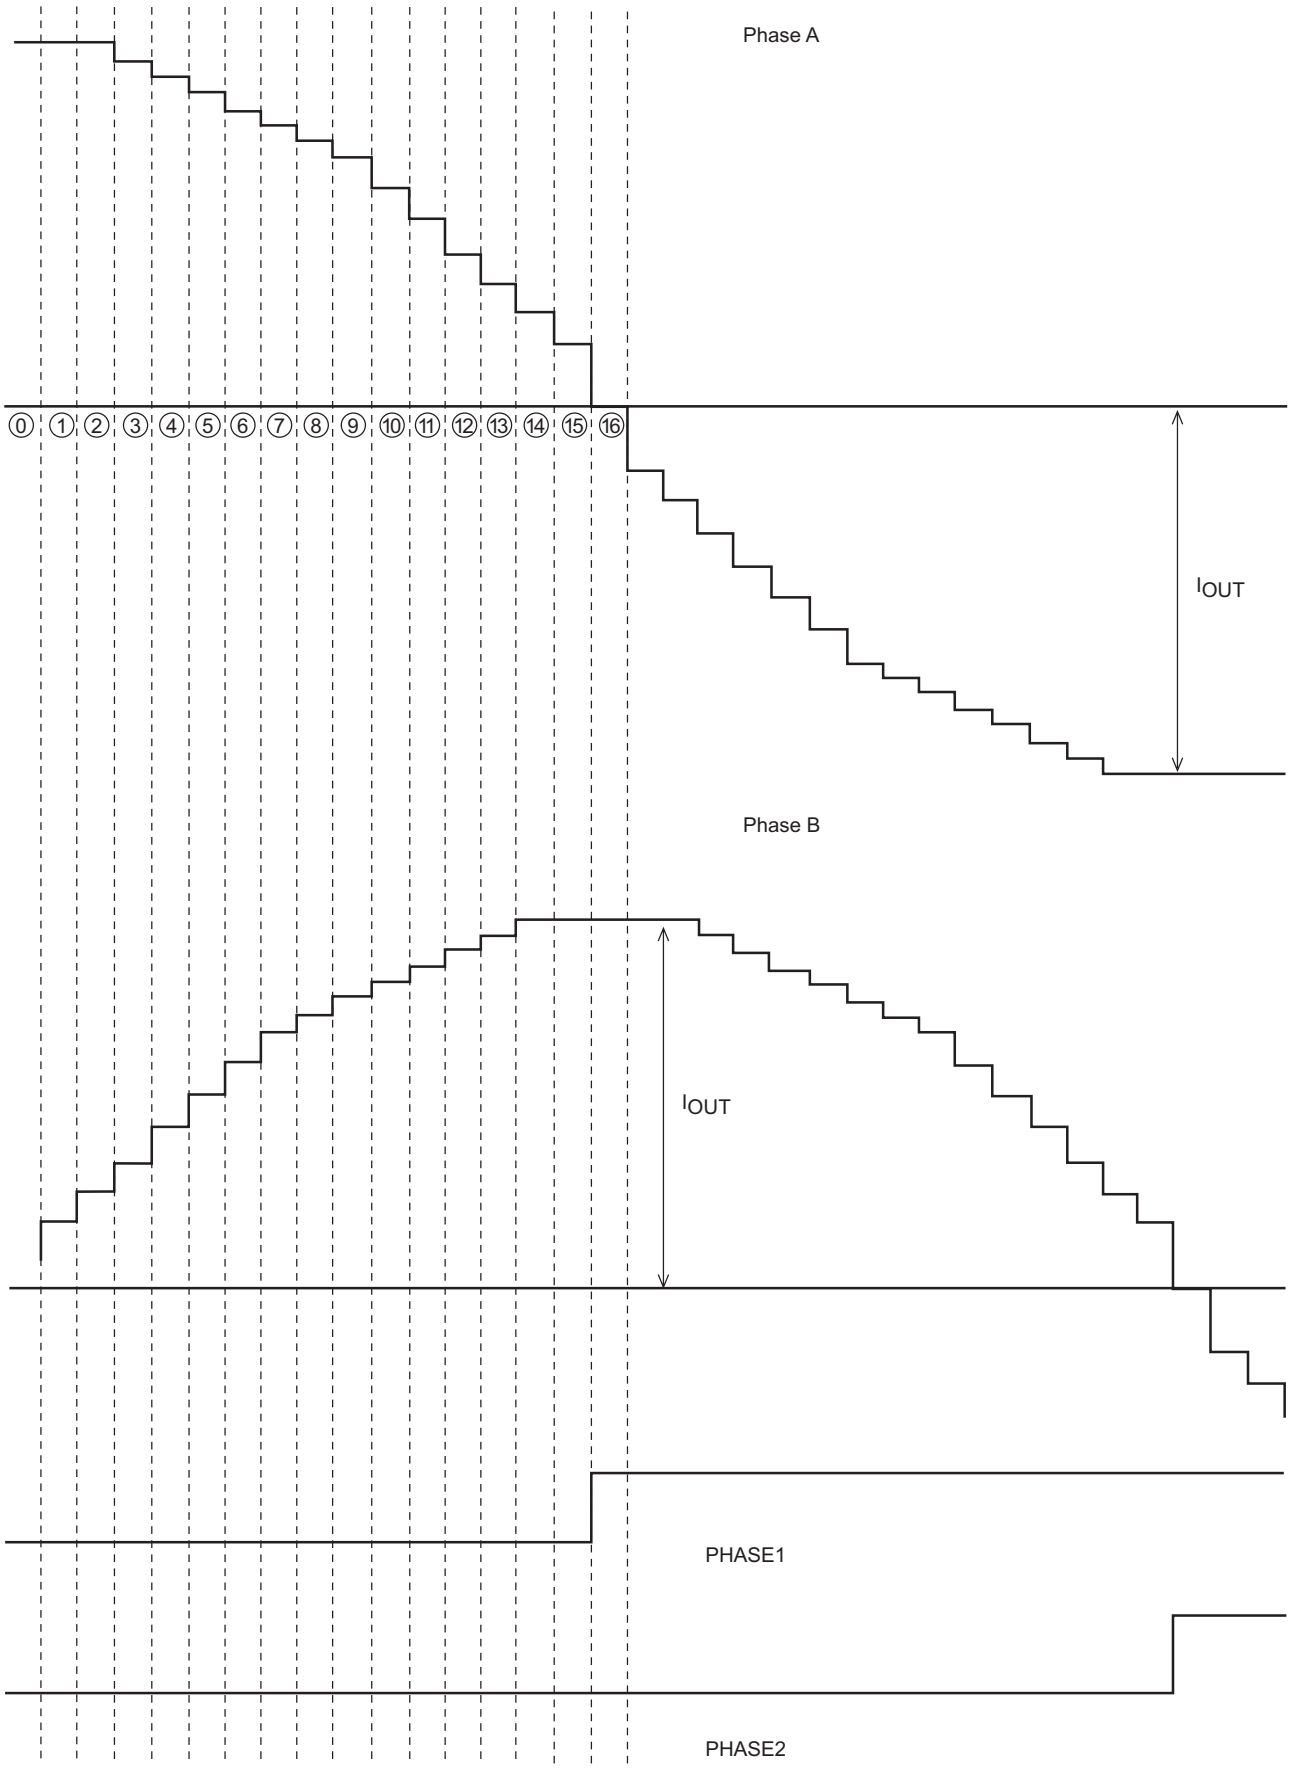
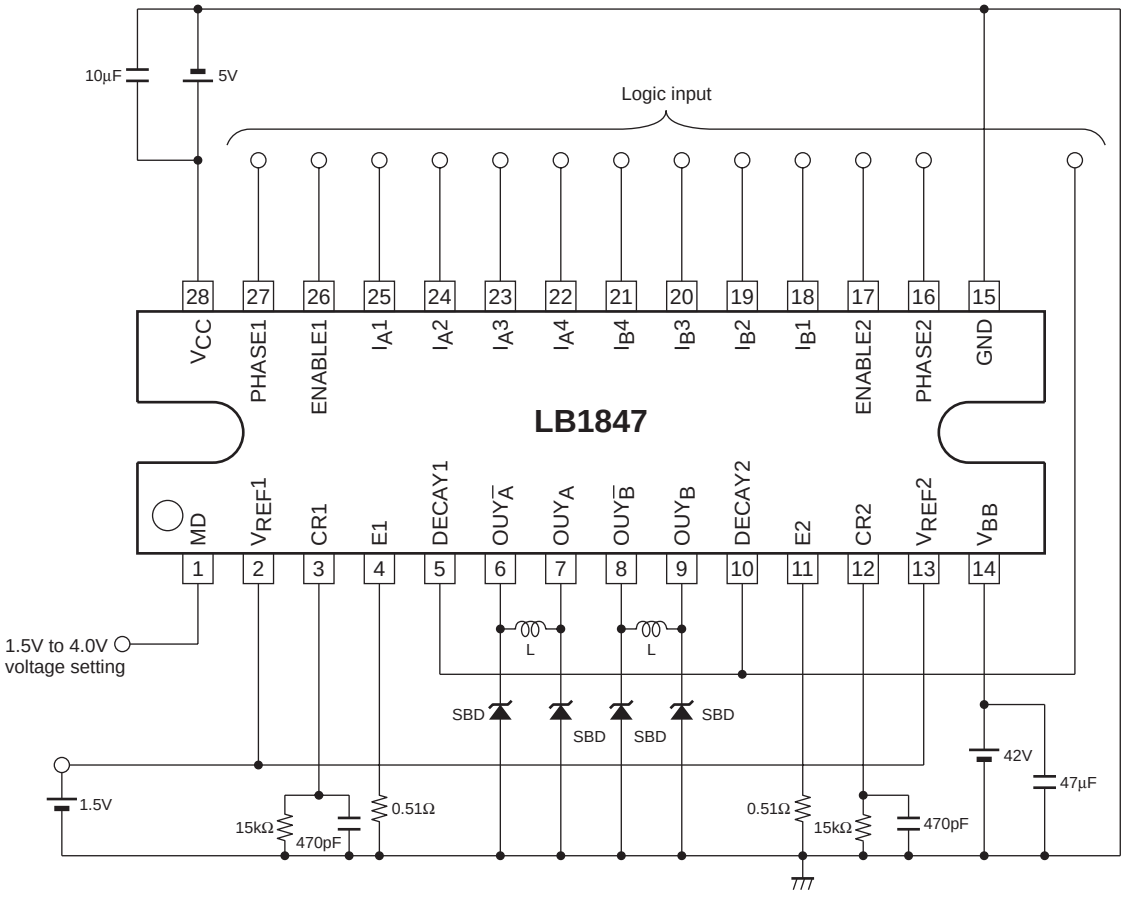
* Rotation angle and composite spectrum are calculated values.

Set Current Waveform Model



Sample Application Circuit



Notes on Usage

1. External diodes
   Because this IC uses upper-side transistor switching in SLOW DECAY mode and dual-side transistor switching in FAST DECAY mode, it requires external diodes between the OUT pins and ground, for the regenerative current during switching OFF. Use Schottky barrier diodes with low VF.

2. VREF pin
   Because the VREF pin serves for input of the set current reference voltage, precautions against noise must be taken. The input voltage range is 0 to 3.0V.

3. GND pin
   The ground circuit for this IC must be designed so as to allow for high-current switching. Blocks where high current flows must use low-impedance patterns and must be removed from small-signal lines. Especially the ground connection for the sensing resistor RE at pin E, and the ground connection for the Schottky barrier diodes should be in close proximity to the IC ground.
   The capacitors between V_{CC} and ground, and V_{BB} and ground should be placed close to the V_{CC} and V_{BB} pins, respectively.

4. Simultaneous ON prevention function

This IC incorporates a circuit to prevent feed-through current when phase switching. For reference, the output ON and OFF delay times at PHASE and ENABLE switching are given below.

Reference Data * typical value

		Sink side	Source side
PHASE switching (Low → Hi)	ON delay time	1.9µs	2.2µs
	OFF deley time	0.8µs	1.8µs
PHASE switching (Hi → Low)	ON delay time	1.4µs	1.7µs
	OFF deley time	0.9µs	1.35µs
ENABLE switching	ON delay time	2.15µs	2.75µs
	OFF deley time	1.2µs	5.8µs

5. Noise canceler

This IC has a noise canceling function to prevent malfunction due to noise spikes generated when switching ON. The noise cancel time tn is determined by internal resistance of the CR pin and the constant of the externally connected CR components. The constant also determines the switching OFF time.

Figure 1 shows the internal configuration at the CR pin, and Figure 2 the CR pin constant setting range.

Equation when logic voltage V_{CC} = 5V

CR pin voltage $E1 = V_{CC} \times R / (R1 + R2 + R)$ [V]

Noise cancel time $tn \approx (R1 + R2) \times C \times 1n \{(E1 - 1.5) / (E1 - 4.0)\}$ [s]

Switching OFF time $toff \approx -R \times C \times 1n (1.5 / E1)$ [s]

Internal resistance at CR pin : R1 = 1kΩ, R2 = 300Ω (typ.)

*The CR constant setting range in Figure 2 on page 15 is given for reference. It applies to a switching OFF time in the range from 8 to 100µs. The switching time can also be made higher than 100 ms. However, a capacitor value of more than several thousand pF will result in longer noise canceling time, which can cause the output current to become higher than the set current. The longer switching OFF time results in higher output current ripple, causing a drop in average current and rotation efficiency. When keeping the switching OFF time within 100 ms, it is recommended to stay within the CR constant range shown in Figure 2.

Internal configuration at CR pin
