

High Reliability Photologic® Hermetic Sensors

OPL800TX, OPL800TXV

Features:

- 100 % screened and quality conformance tested to Optek's High Reliability program
- Direct TTL/STTL interface
- Hermetic, lensed TO-18 package
- Mechanically and spectrally matched to OP235/OP236TX/TXV LEDs

Description:

The OPL800TX/TXV is a high reliability optoelectronic microcircuit that incorporates a photodiode, linear amplifier and Schmitt trigger on a single silicon chip. The device features TTL/STTL compatible logic level output which can drive up to 8 TTL loads without additional interface circuitry. The Photologic® chip is mounted on a standard TO-18 header with gold plated leads which is hermetically sealed in a lensed gold plated metal can. These devices are mechanically and spectrally matched to the OP235TX/TXV and OP236TX/TXV infrared emitting diodes. All parts are processed to Optek's 100 percent screening program patterned after Method 5004 of MIL-STD-883 and the quality conformance testing of Method 5005. Typical characteristic curves are shown on the commercial OPL800 datasheet.

Applications:

- Non-contact reflective object sensor
- Assembly line automation
- Machine automation
- Machine Safety
- End of travel sensor
- Door sensor
- Military and harsh environments

Absolute Maximum Ratings (T_A = 25° C unless otherwise noted)

Supply Voltage, V _{CC} (not to exceed 3 sec)	+10.0 V
Storage Temperature Range	-55° C to +150° C
Operating Temperature Range	-55° C to +125° C
Lead Soldering Temperature [1/16 inch (1.6 mm) from case for 5 sec. with soldering iron]	240°C ⁽¹⁾
Power Dissipation	250 mW ⁽²⁾
Duration of Output Short to V _{CC} or Ground	1.00 sec
Irradiance	3 mW/cm ²

Notes:

1. RMA flux is recommended. Duration can be extended to 10 seconds maximum when wave soldering.
2. Derate linearly 2.5 mW/°C above 25°C.
3. Light measurements are made with λ = 935 nm.
