

## MIC24085

18V, 3A, 1MHz, High-Performance,  
Integrated FET Buck Regulator  
in Tiny 3mm × 3mm QFN

### General Description

Micrel's MIC24085 is a constant-frequency, current-mode PWM buck regulator with integrated switchers. The MIC24085 is targeted for cost-sensitive and high-performance applications.

The MIC24085 operates over a supply range of 4.5V to 18V at a fixed 1MHz switching frequency and can be used to provide up to 3A of output current. The output voltage is adjustable down to 0.9V.

The MIC24085 provides the features of low standby current at 10 $\mu$ A, device enable, input undervoltage lockout, and output voltage monitoring. The part also provides fault protections of overcurrent and overtemperature.

The MIC24085 is available in a 16-pin 3mm × 3mm QFN package with a junction operating range from -40°C to +125°C.

Datasheets and support documentation are available on Micrel's web site at: [www.micrel.com](http://www.micrel.com).

### Features

- Input voltage range 4.5V to 18V
- 3A output current
- 1MHz switching frequency
- 0.9V reference voltage with  $\pm 1.5\%$  accuracy
- Fixed output voltages are available at:  
1.5V/1.8V/2.5V/3.3V/5V
- Peak current-mode PWM with internal compensation
- PFM mode for light load efficiency
- 10 $\mu$ A typical shutdown current
- 4ms internal soft start
- Cycle-by-cycle current limit with frequency foldback
- Output overvoltage protection
- Enable input/power-good (PG) output
- Thermal-shutdown protection
- -40°C to +125°C junction temperature range
- Available in 16-pin 3mm × 3mm QFN package

### Applications

- Camera, set-top box, gateways, and routers
- Networking/telecom infrastructure
- Printers, scanners, graphic cards, and video cards

### Typical Applications

## Ordering Information

Part Number	Output Voltage	Junction Temperature Range	Package	Lead Finish
MIC24085AYML	ADJ	-40°C to +125°C	16-Pin 3mm x 3mm QFN	Pb-Free
MIC24085BYML	1.5V			
MIC24085CYML	1.8V			
MIC24085DYML	2.5V			
MIC24085EYML	3.3V			
MIC24085FYML	5V			

## Pin Configuration

16-Pin 3mm × 3mm QFN (ML)  
(Top View)

## Pin Description

Pin Number	Pin Name	Pin Function
1, 12, 13, 16	SW	Switch Node (Output): Power stage output. Connect an inductor to this pin.
2, 3, 11	VCC	Supply Voltage (for control circuit and power stage): A ceramic input capacitor between VCC and the power ground (PGND) is required.
4	GND	Analog Ground: GND is the ground path of the control circuitry.
5	FB	Feedback (Input): Input to the error amplifier of the PWM controller. The FB pin is regulated to 0.9V. A resistor divider connecting the feedback to the output is used to adjust the desired output voltage.
6, 7	NC	No connection.
8	PG	Power Good (Output): Open drain output, which needs a pull-up. The PG pin turns logic high when the converter output voltage is regulated in the range from 93% to 103% of the setting.
9	EN	Enable (Input): An accurate Enable with hysteresis is provided. High = enable, Low = shutdown. Enable has an internal pull-up to ensure a stable state if this pin is not connected.
10	BST	Boost (Output): Bootstrapped voltage to the high-side N-channel MOSFET. A boost capacitor of 0.1µF is connected between the BST pin and the SW pin.
14, 15	PGND	Power Ground: PGND is the ground path for the power stage.
EP	ePAD	Exposed Pad. It must be connected to PGND on the PCB.

**Absolute Maximum Ratings<sup>(1)</sup>**

V <sub>VCC</sub> to PGND	-0.3V to +20V
V <sub>SW</sub> to PGND	-0.3V to +20V
V <sub>EN</sub> , V <sub>FB</sub> , V <sub>PG</sub> to GND	-0.3V to +6V
V <sub>BST</sub> to V <sub>SW</sub>	-0.3V to +6V
V <sub>BST</sub> to PGND	-0.3V to +26V
PGND to GND	-0.3V to +0.3V
Junction Temperature	+150°C
Storage Temperature (T <sub>S</sub> )	-65°C to +150°C
Lead Temperature (soldering, 10sec)	260°C
ESD Rating <sup>(3)</sup>	2kV

**Operating Ratings<sup>(2)</sup>**

Supply Voltage (V <sub>VCC</sub> )	4.5V to 18V
Output Current	3A
Junction Temperature (T <sub>J</sub> )	-40°C to +125°C
Junction Thermal Resistance	
MLF-16 (θ <sub>JA</sub> )	68°C/W
MLF-16 (θ <sub>JC</sub> )	7.5°C/W

**Electrical Characteristics<sup>(4)</sup>**

V<sub>VCC</sub> = 12V; T<sub>A</sub> = 25°C, unless noted. **Bold** values indicate -40°C ≤ T<sub>J</sub> ≤ +125°C.

Parameter	Condition	Min.	Typ.	Max.	Units
<b>Power Supply Input</b>					
V <sub>CC</sub> Input Voltage Range		<b>4.5</b>		<b>18</b>	V
Quiescent Supply Current	No Switching, V <sub>FB</sub> = 1.5V		2.3		mA
Shutdown Supply Current	V <sub>EN</sub> = 0V		5	<b>10</b>	μA
V <sub>CC</sub> UVLO Threshold			4.3	<b>4.5</b>	V
V <sub>CC</sub> UVLO Hysteresis			650		mV
<b>Reference (MIC24085AYML)</b>					
Feedback Reference Voltage	-40°C ≤ T <sub>J</sub> ≤ +125°C (±1.5%)	<b>0.886</b>	0.9	<b>0.914</b>	V
FB Bias Current	V <sub>FB</sub> = 0.6V		50	<b>500</b>	nA
Soft-Start Time			4		ms
Load Regulation	I <sub>OUT</sub> = 100mA to 3A		0.5		%
Line Regulation	V <sub>VCC</sub> = 4.5V to 18V		0.5		%
<b>Enable Control</b>					
EN Logic Level High		<b>2.2</b>			V
EN Logic Level Low				<b>0.8</b>	V
EN Hysteresis			480		mV
EN Bias Current	V <sub>EN</sub> = 5V		3.5		μA
	V <sub>EN</sub> = 0V		-1.5		
<b>PWM</b>					
Switching Frequency	V <sub>FB</sub> = 0.9V	<b>0.9</b>	1.0	<b>1.1</b>	MHz
Foldback Switching Frequency	V <sub>FB</sub> < 60% × 0.9V		250		kHz
Maximum Duty Cycle	V <sub>FB</sub> = 0V, 1MHz		97		%
Minimum Duty Cycle	V <sub>FB</sub> = 1V		0		%

**Notes:**

- Exceeding the absolute maximum ratings may damage the device.
- The device is not guaranteed to function outside its operating ratings.
- Devices are ESD sensitive. Handling precautions are recommended. Human body model, 1.5kΩ in series with 100pF.
- Specification for packaged product only.

**Electrical Characteristics<sup>(4)</sup> (Continued)**

$V_{CC} = 12V$ ;  $T_A = 25^{\circ}C$ , unless noted. **Bold** values indicate  $-40^{\circ}C \leq T_J \leq +125^{\circ}C$ .

Parameter	Condition	Min.	Typ.	Max.	Units
<b>Internal MOSFET</b>					
High Side On-Resistance	$I_{SW} = 1A$		135		m $\Omega$
Low Side On-Resistance	$I_{SW} = 1A$		90		m $\Omega$
<b>Overcurrent Protection</b>					
Current-Limit Threshold	$V_{FB} = 0.9V$	<b>3.4</b>	3.8	<b>4.4</b>	A
<b>Power Good</b>					
Power Good Threshold Voltage	Sweep $V_{FB}$ from Low-to-High	<b>91</b>	93	<b>95</b>	% $V_{OUT}$
Power Good Hysteresis	Sweep $V_{FB}$ from High-to-Low		1.5		% $V_{OUT}$
Power Good Low Voltage	$V_{FB} < 90\% \times V_{NOM}$ , $I_{PG} = -0.3mA$		50	<b>100</b>	mV
Power Good Recovery Hold Time	PG recovery after power restoration	9	11	<b>12</b>	ms
<b>Thermal Protection</b>					
Overtemperature Shutdown	$T_J$ Rising		170		$^{\circ}C$
Overtemperature Shutdown Hysteresis			10		$^{\circ}C$

## Typical Characteristics

$T_J = -40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ ,  $V_{CC} = 12\text{V}$  (unless otherwise noted).

**Efficiency vs. Output Current**  
( $V_{OUT} = 1.8\text{V}$ )

**Efficiency vs. Output Current**  
( $V_{OUT} = 3.3\text{V}$ )

**Efficiency vs. Output Current**  
( $V_{OUT} = 5\text{V}$ )

**Efficiency vs. Input Voltage**  
( $V_{OUT} = 3.3\text{V}$ )

**Load Regulation**  
( $V_{OUT} = 3.3\text{V}$ )

**Line Regulation**  
( $I_{OUT} = 1\text{A}$ )

**Shutdown Current vs. Temperature**

**Output Voltage vs. Temperature**

## Typical Characteristics (Continued)

$T_J = -40^\circ\text{C}$  to  $+125^\circ\text{C}$ ,  $V_{CC} = 12\text{V}$  (unless otherwise noted).

**Oscillator Frequency vs. Temperature**  
( $I_{OUT} = 300\text{mA}$ )

**Quiescent Current vs. Temperature**  
(No Load)

**Input Current vs. Temperature**  
(No Load/No Switching)

## Functional Characteristics

$T_J = -40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ ,  $V_{CC} = 12\text{V}$  (unless otherwise noted).

**Start-Up Response**

**Load Step – 100mA to 1A**  
( $V_{CC} = 12\text{V}$ ,  $V_{OUT} = 1.8\text{V}$ )

**Load Step – 100mA to 2A**  
( $V_{CC} = 12\text{V}$ ,  $V_{OUT} = 1.8\text{V}$ )

**Load Step – 100mA to 1A**  
( $V_{CC} = 12\text{V}$ ,  $V_{OUT} = 3.3\text{V}$ )

**Load Step – 100mA to 2A**  
( $V_{CC} = 12\text{V}$ ,  $V_{OUT} = 3.3\text{V}$ )

**Line Transient Response**  
( $V_{CC} = 12\text{V}$ ,  $V_{OUT} = 3.3\text{V}$ )

# Functional Diagram

## Functional Description

Micrel's MIC24085 is an 18V, 3A, 1MHz buck regulator with integrated MOSFETs for low-cost high-performance applications. The MIC24085 provides basic features including enable, power good, internal soft-start, current-limit, and overtemperature protections.

### VCC Supply Voltage and UVLO

The MIC24085 is held in the off state until VCC reaches the UVLO threshold, which has a 650mV hysteresis. A ceramic capacitor from VCC to PGND is recommended for clean operation.

### Enable and Soft-Start

When the MIC24085 is enabled, the reference voltage is controlled to ramp-up from 0V to 0.9V in approximately 4ms. During the soft-start, the current limit is enabled to protect the device in case of a short circuit present at the output.

### Peak Current-Mode PWM

To achieve fast transient response, the peak current-mode PWM control is employed in the MIC24085. As illustrated in the [Functional Diagram](#), the high-side MOSFET current (ISW) is sensed and summed with a slope-compensating ramp. Then it is compared with the error amplifier output to generate a PWM signal.

The loop compensation is designed internally in the MIC24085 to ensure loop stability, even with a low-ESR capacitor at the output, such as a ceramic output capacitor.

### PFM Mode at Light Load

The MIC24085 runs in asynchronous buck mode at light load, where the bottom MOSFET is turned off when the inductor current drops to zero. This scheme prevents the output energy from being pumped back to the input, and improves the over-all efficiency.

### Current Limit and Frequency Foldback

In the MIC24085 ISW is also used to determine over-current conditions. As the peak inductor current is limited, the output voltage of the buck converter drops as the load current increases. When the output voltage reaches 60% of regulated voltage (or feedback voltage reaches 60% of 0.9V), the switching frequency is forced to fold back, from 1MHz to 250kHz. This current-limit scheme reduces the average inductor current (even with the same peak inductor current), and improves the power consumption at the overload conditions.

The current limit is always active when the regulator is enabled. Once the overcurrent condition is removed, the device runs to a soft-start and returns to a normal operation.

### Power Good (PG)

Power good (PG) is an open drain output pin. A 10kΩ resistor to VOUT is required for pull-up. The PG pin turns low if the output voltage is below 93% of the reference voltage (0.9V). After VOUT fault and recovery, PG is held low for a typical duration of 11ms. See the [Electrical Characteristics](#) table for additional information.

Channel 1: VOUT, Channel 2: PG, Hold Time: 11ms

### Output Voltage Protection

The MIC24085 turns both high-side and low-side MOSFETs off to shut down the buck regulator output voltage when the output voltage exceeds 103% of the regulated voltage. After the output voltage drops back below the threshold, the MIC24085 runs to a soft-start.

### Thermal Shutdown

The MIC24085 turns both high-side and low-side MOSFETs off to shut down the buck regulator output voltage when the internal temperature is over the setting threshold at around 170°C. After the temperature drops back below the threshold, the MIC24085 runs to a soft-start.

### Transient Response and Control Loop Bandwidth

MIC24085 with adjustable output voltage has been designed to work under a wide range of input and output voltages, supporting different values and types of output capacitance. By design, the MIC24085 has a lower control loop bandwidth. For designs with aggressive load step response requirements, using a fixed-output voltage version with a larger output capacitance is recommended.

**Adjustable Output Voltage:  $V_{IN} = 12V$ ,  $V_{OUT} = 5V$ ,**  
**Load Step = 0.5A to 2.5A at 50mA/μs with**  
**1x470μF and 1x100μF output capacitance.**  
**Channel 1: VOUT, Channel 2: PG, Channel 3: Load Step**
