

# MAX4484/MAX4486/ MAX4487

# Single/Dual/Quad, Low-Cost, Single-Supply 7MHz, Rail-to-Rail Op Amps

## General Description

The MAX4484/MAX4486/MAX4487 single/dual/quad low-cost general-purpose op amps operate from a single +2.7V to +5.5V supply. The op amps are unity-gain stable with a 7MHz gain-bandwidth product, capable of driving an external 2kΩ load with rail-to-rail output swing. The amplifiers are stable with capacitive loads of up to 100pF. The MAX4484/MAX4486/MAX4487 are specified from -40°C to +125°C, making them suitable for a variety of harsh environments.

The single MAX4484 is available in the ultra-small 5-pin SC70, while the dual MAX4486 is packaged in the space-saving 8-pin SOT23 and μMAX® packages. The quad MAX4487 is available in the 14-pin SO and TSSOP packages.

## Applications

- Single-Supply Zero-Crossing Detector
- Instruments and Terminals
- Portable Communicators
- Electronic Ignition Modules
- Infrared Receivers for Remote Controls
- Sensor Signal Detection

μMAX is a registered trademark of Maxim Integrated Products, Inc..

## Pin Configurations/Functional Diagrams

## Features

- 7MHz Unity-Gain Stable Bandwidth
- Stable for Capacitive Loads Up to 100pF
- +2.7V to +5.5V Single-Supply Voltage Range
- Ground-Sensing Inputs
- Outputs Swing Rail-to-Rail
- No Phase Reversal for Overdriven Inputs
- 85dB AVOL with 2kΩ Load
- 0.01% THD with 2kΩ Load
- Available in Space-Saving Packages
  - 5-Pin SC70 (MAX4484)
  - 8-Pin SOT23 (MAX4486)

## Ordering Information

### Absolute Maximum Ratings

Power Supply Voltage ( $V_{DD}$ to $V_{SS}$ ).....	-0.3V to +6V	8-Pin $\mu$ MAX (derate 4.5mW/°C above +70°C).....	362mW
All Other Pins .....	( $V_{SS} - 0.3V$ ) to ( $V_{DD} + 0.3V$ )	14-Pin TSSOP (derate 9.1mW/°C above +70°C).....	727mW
Output Short-Circuit Duration (OUT shorted to $V_{DD}$ or $V_{SS}$ ) .....	Continuous	14-Pin SO (derate 8.33mW/°C above +70°C).....	667mW
Continuous Power Dissipation ( $T_A = +70^\circ\text{C}$ )		Operating Temperature Range.....	-55°C to +125°C
5-Pin SC70 (derate 3.1mW/°C above +70°C).....	247mW	Junction Temperature.....	+150°C
5-Pin SOT23 (derate 7.1mW/°C above +70°C) .....	571mW	Storage Temperature Range.....	-65°C to +150°C
8-Pin SOT23 (derate 9.1mW/°C above +70°C) .....	727mW	Lead Temperature (soldering, 10s) .....	+300°C
8-Pin SO (derate 5.88mW/°C above +70°C).....	471mW		

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### Electrical Characteristics— $T_A = +25^\circ\text{C}$

( $V_{DD} = +5.0V$ ,  $V_{SS} = 0V$ ,  $V_{CM} = 0V$ ,  $V_{OUT} = V_{DD}/2$ ,  $R_L = \infty$  to  $V_{DD}/2$ , unless otherwise noted.)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS

## Detailed Description

### Rail-to-Rail Output Stage

The MAX4484/MAX4486/MAX4487 can drive a 2kΩ load and still swing within 50mV of the supply rails. Figure 1 shows the output swing of the MAX4484 configured with  $A_V = +1V/V$ .

### Driving Capacitive Loads

Driving a capacitive load can cause instability in many op amps, especially those with low quiescent current. The MAX4484/MAX4486/MAX4487 are unity-gain stable for a range of capacitive loads up to 100pF. Figure 2 shows the response of the MAX4484 with an excessive capacitive load. Adding a series resistor between the output and the load capacitor (Figure 3) improves the circuit's response by isolating the load capacitance from the op amp's output.

## Applications Information

### Power Supplies and Layout

The MAX4484/MAX4486/MAX4487 operate from a single +2.7V to +5.5V power supply. Bypass the power supply with 0.1μF capacitor to ground. Good layout techniques optimize performance by decreasing the amount of stray capacitance at the op amp's inputs and outputs. To decrease stray capacitance, minimize trace lengths by placing external components close to the op amp's pins. Use surface-mount components for best results.
