Power management

Driving smart power in automotive

Voltage regulators

Electronic control units (ECUs), gateways, and body modules represent innovative electronic solutions for automotive applications requiring stable power supplies. ST offers a wide range of linear voltage regulators with extra features to support microprocessor operations such as watchdog, reset, and early warning functions as well as a low quiescent current during module standby that help prevent fast battery discharge when the vehicle is stopped.

- Easy implementation
- High reliability
- Limited number of external components needed
- Low dropout voltage
- Low output voltage tolerance
- Low quiescent current

- Operating DC supply voltage : Up to 40V
- Enable input for enabling/disabling the voltage regulators
- Reset circuit sensing the output voltage down to 1 V
- Programmable reset pulse delay with external capacitor
- Programmable watchdog timer with external capacitor
- Thermal shutdown and short circuit protection
- Wide range of output currents (from 100 to 500 mA)
- Wide temperature range ($T_j = -40$ to 150°C)

- Body control module (BCM)
- Powertrain
- HVAC control module
- Door zone
- Seat positioning
- Electric park brake
- Window lift
- LED Light control
- Sunroof module
- Gearbox
- More

* L4938ED and L4938EPD dual output voltage devices (see table on page 6)

Power management (SBC)

Smart power management is increasingly pervading the automotive market, finding applications in ECUs, body modules, and gateways. To meet these demands, ST offers highly versatile state-of-the-art power management (System Basis Chips) to supply and drive loads and microcontrollers as well as to establish a reliable interface using dedicated communication protocols. This new power management family offers a broad selection of features and performance characteristics including a very low quiescent current and fail-safe functions.

- For L99PM60J, L9952GXP, L99PM62GXP and L99PM72GXP
- For L9952GXP, L99PM62GXP and L99PM72GXP
- For L99PM62GXP and L99PM72GXP
- For L99PM72GXP

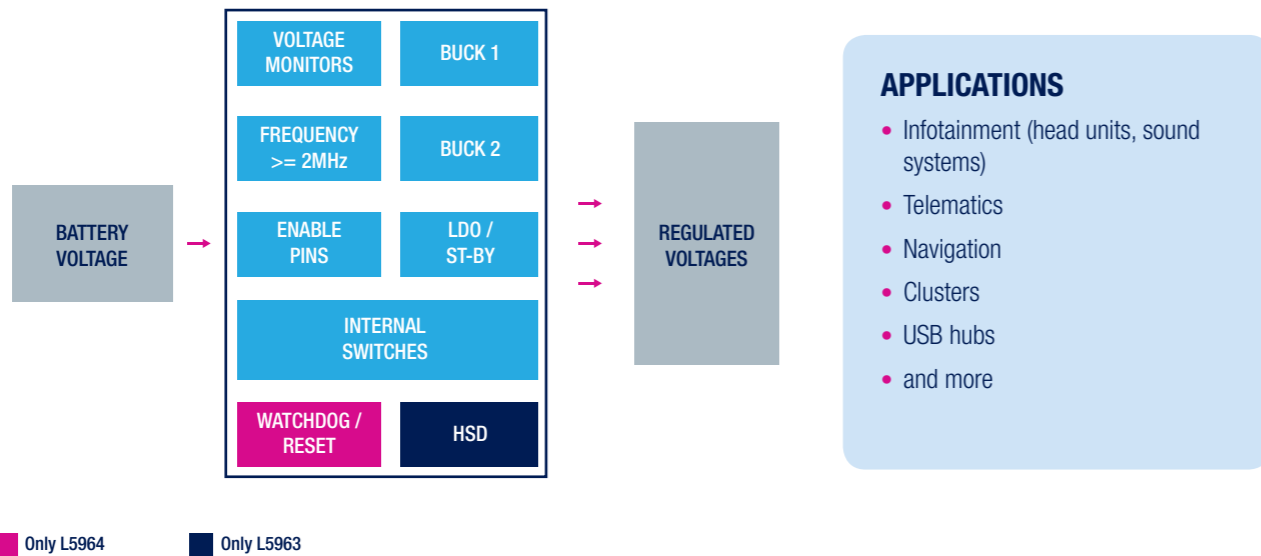

TYPICAL APPLICATIONS FOR L99PM62GXP AND L99PM72GXP

Multichannel voltage regulators

As applications concentrate many functions in small areas and complex processors and surrounding components increase their demand on power rails and current absorption, the demand for voltage regulators with multiple outputs is increasing. Fully integrated solutions are necessary, considering that often other features like rail sequencing, voltage monitors and basic diagnostics are mandatory. ST's double-voltage regulators can easily support the growing demand for USB power management.

TYPICAL USB APPLICATION

Development tools

To help developers get the most of our voltage regulators and power management solutions, ST provides a complete set of affordable tools for evaluating the capabilities of our solutions and demonstrating their main characteristics.

SAMPLE KIT

- SAMPLES-AUTOPMIC : A collection of the most representative products in order to select the best device for a specific application.

EVALUATION KITS

- EV-AUTO-LDOS : Easy boards with the targeted device mounted on an optimized PCB allowing for simple connection to an external environment to help ensure an effective design-in phase.
- EVAL-L99PM62-72 : Dedicated evaluation board with L99PM62GXP-L99PM72GXP daughter boards, drivers & user-friendly GUI.
- STM8A-DISCOVERY : Discovery kit with STM8AF and STM8AL 8-bit MCU evaluation boards with integrated L99PM62GXP power management IC

- EVAL-L5963 and EVAL-5963Q : Evaluation boards supporting the L5963 multichannel voltage regulator

Order code	Evaluation tool	Components
SAMPLES-AUTOPMIC	Sample kit	L4995K; L5150BN; L5300GJ; L99PM60J; L99PM62GXP; L5963D-L5963Q
EV-AUTO-LDOS	Easy board	L5150GJ; L5300AH7; L4995AK
EVAL-L99PM62-72	Evaluation board	L99PM62GXP; L99PM72GXP
STM8A-DISCOVERY	Discovery kit	L99PM62GXP
EVAL-L5963	Evaluation board	L5963 (PowerSSO-36)
EVAL-L5963Q	Evaluation board	L5963 (VQFPN-48)
