

TCP3500 Series

3-phase 3500 W AC-DC Industrial PSU

The TCP3500 series is an AC-DC converter with adjustable DC output and universal 3-phase AC input. Conduction cooling (No Fans) makes this power supply series suitable for a wide variety of Industrial Applications that can utilize conduction or liquid cooling, negating the use of fans.

Emphasis is given on reliability and long life. Parallel operation is possible up to 16 units (50.4 kW). Passive or active current share system can be selected.

The PSU includes DSP which enables monitoring of electrical parameters (including input voltage of all 3 phases) and controlling the PSU from system controller.

An RS485 bus is used for command, monitoring and diagnostic information that can be supplied to a system controller.

- ¹ SRTN and Vout- are connected together inside the power supply (not valid for TCP4000-H090). The power supplies with maximal output voltage >60V have all signals on 15-pin DSUB connector galvanically isolated from main output (including SENSE +/- and ACSH).
- ² 120 Ω resistors connection required between RS485-xA and RS485-xB on both sides externally.
- ³ The pin 14 on TCP4000-H090 is not internally connected to ACSH signal (see capture 8.6).
